

Treehouse Reporting

The UML diagram below shows some of the tables and relationships we deal with on a daily basis. We have multiple companies as clients. Each of those companies can have multiple sites, and each of those sites can have multiple domains. Sites belong to a single association.

A domain, site, or company is considered active if it's not deleted or on hold, and doesn't belong to anything that is deleted or on hold.

Please complete the following exercises and send back the queries used to generate each list.

- 1) Provide a list (association name, company name, domain) of all active primary supercharged domains belonging to the Basement Systems, Inc. association.
- 2) Provide a list (association name, company name, site name) of all active sites that **do not** have a domain.
- 3) Provide a list (site id, site name) of distinct active sites who have one or more domain, and whose domains are **all** deleted.
